The first green book page

There is a well known super market of our city:

Container where you can throw the fried oil.

There is a company that collects and converts it to biofuel: <http://www.revive.gr/> [1]

It is very simple: Use an empty plastic soda bottle example 2 lt gathering used oil when filling a stroll from the AB and empty the bins.

In this super market operates recycling center where you can also recycle paper, plastic, glass, aluminum, small electrical appliances, mobile phones, batteries.

Used oil in the kitchen sink ... This is one of the biggest mistakes we make. Why do so;

Simply because there is nobody to tell us the right way.

So then, the best we can do is to put the oil in a plastic bottle (water, soda), to close the well and throw in regular trash ..

This is because a liter OIL Infects Almost a million gallons of water, a quantity which is sufficient to meet the needs of a person in water for 14 years!.

If you choose to take this message to your friends, the environment will grateful. After all it is good for us all!
